Machine Learning on Google Cloud Platform

Speech recognition can help evaluate shared decision making and predict medication adherence in primary care setting

Effective Amazon Machine Learning

Alexis Perrier

Senior AI / GenAI Engineer, I build production AI systems for startups, GCP, Freelance
Paris, Île-de-France, France

Summary

I help startups and small teams design and build AI-powered applications, with a focus on GenAI, NLP, and machine learning.My work often starts at the prototype or POC stage and aims to produce clear, usable systems that teams can evaluate, extend, or take toward production.I have a background in machine learning, stochastic processes, and signal processing, and over 20 years of experience in software development. I've worked across research, startups, and industry, and led data projects in domains such as fintech, healthcare, mobility, and education.I focus on cost-aware, simple solutions and help teams avoid unnecessary complexity. The goal is to build systems that match their stage and constraints, rather than over-engineering for scale too early.Alongside client work, I teach AI and machine learning at universities and engineering schools, and I've authored books and courses on applied machine learning. Teaching helps me communicate clearly with mixed technical teams and move projects forward efficiently. Based in Paris — available for freelance missions with startups and small companies.

Experience

SkatAI

Data Scientist / AI Engineer – Freelance
September 2017 - Present (8 years 5 months)
Paris, Ile-de-France, France

I work as a freelance AI engineer on early-stage and applied AI projects, typically when teams want to explore, validate, or ship AI-powered features without over-engineering. Most missions involve small to medium-scope systems, built to be usable, testable, and maintainable with limited resources.

My work spans GenAI, NLP, and applied machine learning, often in contexts where requirements are evolving and volumes are still modest. I focus on

making clear technical choices, keeping systems simple, and aligning solutions with product goals and budget constraints.

Recent projects include:

- Mimesis: chatbot for student interview training and evaluation, using OpenAI Codex, Google ADK and Gemini, designed as a complete application rather than a demo
- Moliere.love, an educational web and mobile application, built end-to-end using Claude Code, combining GenAI features with a full application stack

Other representative projects:

- Coaching data science teams in banking, HR, and EdTech
- Demand forecasting for household appliances (Electrolux)
- NLP and speech-related projects in healthcare and music tech
- Social network analysis and content moderation research projects

Alongside client work, I've been teaching AI, machine learning, and data science for several years, including at Sciences Po, and Epita, as well as in online programs. Teaching keeps me grounded in fundamentals and helps me work efficiently with non-specialist stakeholders.

Technical scope (applied, not exhaustive):

- GenAI & NLP: language models, embeddings, transformers, information extraction
- Machine learning & statistics: scikit-learn, gradient boosting, probabilistic models
- Time series, forecasting, and signal processing
- Python-based development and experimentation
- Cloud environments: GCP and AWS

Karhoo
Lead Data Scientist
January 2022 - April 2023 (1 year 4 months)
Paris

Lead data scientist on mobility-related machine learning projects for a global taxi marketplace. Worked on pricing, coverage optimization, and cancellation forecasting, in close collaboration with product and engineering teams.

Led a small team and contributed to the transition from bespoke models to more standardized and maintainable approaches using Vertex AI AutoML, within an existing GCP environment. Focus on robustness, iteration speed, and practical deployment constraints.

Tech: GCP (Vertex AI, BigQuery), MLflow, Python

Praexo
Chief Data Scientist
January 2021 - January 2022 (1 year 1 month)
Paris, Île-de-France, France

Chief Data Scientist at a fintech startup focused on investor relations and targeting. Led a small data team and worked on applied NLP and recommendation systems used by internal teams and clients.

Contributed to the design and deployment of machine-learning services in production on AWS, including:
- information extraction from investor feedback using NLP
- investor recommendation and ranking models (XGBoost)

Tech: Python, scikit-learn, PyTorch, AWS (Lambda, EC2, S3, RDS), PostgreSQL, spaCy, Hugging Face

UM6P - University Mohammed VI Polytechnic
Lecturer
September 2019 - March 2021 (1 year 7 months)
Morocco

In charge of the data science track at EMINES - School of Industrial Management

Docent Health
Lead Data Scientist
January 2017 - January 2018 (1 year 1 month)
Greater Boston

Lead data scientist at a healthcare startup focused on improving patient experience in hospitals. Built and led a data science team working on NLP and predictive models applied to patient feedback and clinical data.

The work involved information extraction, statistical analysis, and predictive modeling using data sources such as HCAHPS surveys, EMR data, and noisy interview transcripts.

Berklee Online

Software Support Manager and Data Science Lead
May 2011 - December 2016 (5 years 8 months)
Greater Boston Area

Led software and data initiatives for an online education platform. Built and maintained production systems involving data integration, analytics, and internal tooling.

Bootstrapped early data science and forecasting work (enrollment and pricing), and delivered predictive models integrated with business tools (CRM / Salesforce). Also managed software engineers working on service-oriented architectures and third-party integrations.
Envt: Ruby on Rails, Sinatra, TCL/TK, Postgresql, MongoDb, Continuous integration, AWS

Qameha

Co-Founder, CTO
May 2009 - February 2011 (1 year 10 months)
Greater Paris Metropolitan Region

Co-founded and led the technical development of a SaaS applicant tracking system (ATS). Designed and built the platform end to end (backend, frontend, UX) and led a small engineering team.

The application was reliable, low-maintenance, and processed 100k+ applicants in production.

Freelance

Freelance Web Developer
December 2000 - November 2007 (7 years)
Greater Paris Metropolitan Region

Worked as a freelance web developer, designing and building websites and applications for companies across retail, media, HR, e-commerce, and tourism. Handled projects end to end, from client needs to delivery and maintenance.

Altran Technologies

4 years 9 months

Business Manager
September 1998 - September 2000 (2 years 1 month)
Greater Paris Metropolitan Region

Business Manager in a consulting environment, responsible for P&L and business development for a unit of ~40 engineers and consultants. Worked with major telecom vendors and operators, and scaled the unit's revenue significantly over two years.

This role built strong foundations in client-facing work, sales, and delivery constraints.

Project Management Consultant
January 1996 - August 1998 (2 years 8 months)

As a project manager, I managed several European-wide data network deployment. Among which France Telecom in Portugal for the Mobile operator Optimus and several large entreprise data network projects for companies such as Michelin, or Anixter.

Education

Telecom ParisTech
Doctor of Philosophy (Ph.D.), Signal processing, Mathematics, Stochastic Processes. · (1992 - 1995)

Telecom ParisTech
Master's Degree, Signal Processing · (1990 - 1992)

Université Pierre et Marie Curie (Paris VI)
Master's Degree, Probabilities and Statistics · (1988 - 1990)

Coursera
